BOOK SELECTION FROM OUR SHELVES

DEERING, FERDIE, USDA, MANAGER OF AMERICAN AGRICULTURE. Norman, University of Oklahoma Press, 1945. 281.12 D36

This book was written with the hope of being helpful in stimulating thought and action and that it will lead to remedying the deficiencies of the USDA, thus making a more prosperous nation with security for the dirt farmer.

GIFFORD, JOHN G. LIVING BY THE LAND. Coral Gables, Fla. Parker Art Printing Association, 1945. 279.017 G36.

Man must maintain the fertility of the soil, the beauty of the landscape, and healthful surroundings. You will enjoy this book on conservation, for without it there will never be any real progress in making the most of our resources which is today's number one problem..

SCHULTZ, THEODORE W. AGRICULTURE IN AN UNSTABLE ECONOMY. New York. McGraw-Hill 1945. 281.12 Sch82A.

Each is prone to see agriculture according to his lot; only a few see it as a whole, and fewer still see it as a integral part of an interdependent economy. Not many outside of agriculture see it as farmers do, since most people no longer have roots in the soil. This was once a nation of farmers. Today our workshops are many. Cities and towns and the occupations that go with them shape the horizon of most Americans. Farming is fundamentally different from industrial work and business management. Neither business men nor industrial workers gain from their work the experience needed to understand agriculture, and therein lies a major political as well as a social problem.

SHANNON, FRED A. THE FARMER'S LAST FRONTIER. New York. Farrar & Rinehart, Inc. 1945. 30.9 Sh1.

This book is the fifth in a series of nine volumes on the economic history of the United States. This series has been planned to utilize available sources in the preparation of a full-scale, balanced, cooperative, and readable survey of the growth of American economy and of its transformation to world pre-eminence in industry, trade and finance. As the title suggests, this volume stresses the rounding out of the agricultural domain and the effect of this progress not only upon the farmers in the new frontier areas and agriculture elsewhere in the country, but also upon the whole economy. Emphasis is placed on the significant role played by soils, climate, and other natural forces in the development of American farming.

WEST, JAMES. PLAINVILLE, U.S.A. New York, Columbia University Press. 1945.
280.12 W523.
The author describes certain phases in the life of a small American rural community.

WILDE, S.A. FOREST SOILS AND FOREST GROWTH. Waltham, Mass. Chronica Botanica, 1946. 56.3 W64F.
By virtue of its origin, the knowledge of forest soils incorporates findings made by foresters and soil scientists. Unfortunately, many silvicultural conclusions have been drawn with little knowledge of the underlying soil; a good share of pedological observations has been made with no consideration of the botanical composition or productivity of the native vegetation. In this publication, the author sought to avoid these shortcomings and has aimed to interpret forest soils as carriers of definite floristic associations, as media for the growth of nursery stock or forest plantations, and as dynamic systems that react to different forms of silvicultural cutting. Special effort has been made to stress the importance of large genetic soil groups as natural acclimatization units.

AGRICULTURE

AGRICULTURAL PROSPERITY, HOW MAINTAINED? Chamber of Commerce of the United States Agr. Dept. Washington, 1946. 51 p.
